

Adjustable Left-Hand Thumb Rest

- Supports the left thumb at a more natural and efficient position.
- Allows for effortless operation of the octave key.
- Alleviates left thumb strain due to hyperextension.
- Promotes a more relaxed overall technique in the left hand.

Patent Pending

- Easily customize the degree of tilt to find the optimal positioning for you.

A new ergonomic innovation for saxophone

Hand position with flat stock thumb rest:

- Thumb is hyper-extended when releasing the octave key, causing strain in the left hand.
- Excessive motion required to transition between closing and opening the octave key.
- Closed and unnatural spread between the thumb and index finger.

Hand position with the *INCLINE* thumb rest:

- Thumb does not need to bend backwards to be supported by thumb rest when octave key is not in use.
- Thumb is positioned for greater mechanical advantage, allowing for effortless technique.
- Natural, open spread between the thumb and index finger.
